

Here are our PDF Presets. Please have them use this so that we dont get PDFs that are really large. Will cut down on upload and processing time.

1. Download the Preset to your desk top.
2. In Indesign go to the "File" tab and select "Adobe PDF Presets", "Define"
3. In the PDF Presets window you will click "Load..." and select the "SG High Res.joboptions" file.
4. Once that is loaded in your system then click "Done".
5. In your Indesign file export out a PDF as you normally would but select the "SG High Res" as your export settings.
6. This will generate a PDF that you can send to us directly and it will be press ready. Since the preset is loaded in your Adobe program you do not need to keep it on your desk top.
7. If you load this in Indesign it will be loaded in other Adobe programs - Illustrator and Photoshop.

If you have any questions in this process please give us a call at Toll Free 1.800.794.5594
